

# STIC Search Report Biotech-Chem Library

### STIC Database Tracking Number: 181255

TO: Ruixiang Li

Location: REM-4D59/4C70

Art Unit: 1646

March 14 2006

Case Serial Number: 10/782596

From: P. Sheppard

**Location: Remsen Building** 

Phone: (571) 272-2529

THIS PAGE BLANK (USPTO)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Orphan receptor.
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity)
-!- TISSUE SPECIFICITY: Exclusively expressed in brain.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Eute

Sequence 22, Application US/09622439

Patent No. 6555344

GENERAL INFORMATION:

APPLICANT: Yamanouchi Pharmceutical Co., Ltd.

TITLE OF INVENTION: A novel G protein coupled recepter protein

FILE REFERENCE: Y9905

CURRENT PELICATION NUMBER: US/09/622,439

CURRENT FILING DATE: 2000-08-17

PRIOR APPLICATION NUMBER: UP P1998-060245

PRIOR APPLICATION NUMBER: UP P1998-060245

PRIOR APPLICATION NUMBER: UP P1998-026774

PRIOR FILING DATE: 1998-03-12

PRIOR FILING DATE: 1999-026774

PRIOR FILING DATE: 1999-02-03

NUMBER OF SEQ ID NOS: 26

SOFTMARE: Patentin Ver. 2.0

SEQ ID NO 22

LENGTH: 377

TYPE: PRT

ORGANISM: Rattus Sp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes transmembrane receptors, preferably hums grotein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present inventior relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 373
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Behan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 1; Page 97-98; 187pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Non-endogenous, human G protein-coupled receptors inverse or partial agonists useful as therapeutic

The present amino acid sequence is the hARE-2, an endogenous human orphan CC g protein-coupled receptor (GPCR), expressed in the left and right CC cerebellum. The hARE-2 cDNA was identified using ESTs (expressed sequence CC tag) A1090920 and 68530 as a probe. The orphan GPCR of the invention, CC like all GPCRs has seven transmembrane alpha helices with an CC entracellular N-terminus and an intracellular C-terminus. However, no CC entogenous ligands has yet been identified for the proteins of the CC invention. The orphan GPCRs may be used in the identification of their CC entogenous ligands, and to screen potential GPCR agonists and antagonists CC entogenous ligands, and to screen potential GPCR agonists and antagonists CC entogenous ligands, and to screen potential GPCR agonists and antagonists CC eruse as pharmaceutical agents. The proteins may also be used in the CC study of GPCR-mediated signalling cascades, and to elucidate their CC precise role in normal and diseased human conditions. Nucleic acid cencoding human orphan GPCRs may be used for tissue localisation in CC expression analysis to provide information about their function in CC healthy and pathological states
                                                                                                                                                                                                                                                                                                                                                                                                                                  29-SEP-1999

The invention relates to a human G protein-coupled receptor (GPCR) CC appearing as ABU92259-ABU92277 (encoded by cDNAs ACA93256-ACA93274) named CC hARE-3, hARE-4, hARE-5, hRU93, hRUP6, hRUP7, hGPCRZ7, hARE-1, hARE CC -2, hPR1, hC2A, hCHN3, hCHN4, hCHN6, hCHN9, hCHN9 hCHN10 and hRUF4. CC Also included are a plasmid comprising a vector and one of the cDNAs above and a host cell comprising the plasmid. The GPCRs are useful for the direct identification of candidate compounds as inverse agonists, agonists or partial agonists. In vitro and in vivo systems incorporating CC GPCRs is useful for elucidating and understanding the roles these creceptors play in the human condition, both normal and diseased, as well as understanding the role of constitutive activation as it applies to understanding the signalling cascade. The cDNAs are useful for making a cropbe for dot-blot analysis against tissue mRNA and/or RT-PCR corporative represents a GPCR of the invention

                                                                                                                                                                                                                                                                                           The present invention provides novel human G protein-coupled receptor (GPCR) proteins and their encoding nucleic acids. The invention is useful for making a probe for dot-blot analysis and for RT-PCR identification of the expression of the receptor in tissue samples. The invention is also useful for identifying candidate compounds as inverse agonists, agonists or partial agonists and as research tools in determining the location of the receptors within the body. The present sequence is human orphan G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         07-AUG-2003
                                                                                                                                                                                                                                                                                                                                                                                                                             New cDNA encoding a human G protein coupled receptor, useful for making probe for dot-blot analysis against tissue-mRNA, and/or for RT-PCR identification of the expression of the receptor in tissue samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chen
